Donghun Kang, Ph.D.

The Ohio State University
190 N. Oval Mall, Columbus, Ohio 43210, USA
kang.1582@osu.edu

Education

University of California, Davis — Davis, USA
Ph.D. in Mechanical and Aerospace Engineering, Advisor: Dr. Seongkyu Lee — Sep 2020 – Sep 2024
GPA: 3.91/4.00

Korea Advanced Institute of Science and Technology (KAIST) — Daejeon, South Korea
M.S. in Aerospace Engineering, Advisor: Dr. Oh Joon Kwon — Mar 2016 – Feb 2018
GPA: 3.88/4.00

Korea Aerospace University — Goyang, South Korea
B.S. in Aerospace Engineering — Mar 2010 – Feb 2016
GPA: 3.87/4.00 – Ranked 2nd out of 180

Professional Appointments

Postdoctoral Researcher — Columbus, USA
Department of Mechanical and Aerospace Engineering at The Ohio State University — Oct 2025 – Present

Postdoctoral Researcher — San Diego, USA
Department of Mechanical and Aerospace Engineering at University of California, San Diego — Oct 2024 – Sep 2025

Graduate Research Assistant — Davis, USA
Department of Mechanical and Aerospace Engineering at University of California, Davis — Sep 2020 – Sep 2024

Aerodynamics Engineer — Daejeon, South Korea
Aircraft Aerodynamics Branch at Agency for Defense Development — May 2018 – Sep 2020

Research Experience

Postdoctoral Researcher at University of California, San Diego   Oct 2024 – Sep 2025
Large-Scale Design Optimization Laboratory (PI: Dr. John T. Hwang)   *San Diego, USA*

- Developed Farassat Formulation 1A of Ffowcs Williams-Hawkings acoustic analogy and Fast Fourier Transform (FFT) using Computational System Design Language (CSDL; home-grown open source code) to integrate the advanced acosutic method into multidisciplinary design optimization (MDO)
- Established a modular aerodynamic shape optimization framework (CSDL-CFD (DAFoam) interface) with key components of geometry parametrization, mesh deformation, flow solver, adjoint solver, and optimizer
- Modified CFD (SU2) source code to perform the projection-based reduced-order model for the shape optimization of blended-wing body aircraft

Graduate Research Assistant at University of California, Davis   Sep 2020 – Sep 2024
Computational Flow Physics and Aeroacoustics Laboratory   *Davis, USA*

- Investigated flow-induced noise using wall-resolved large-eddy simulations (LES), advanced time-frequency methods, and data-driven techniques: demarcating the role of hydrodynamic and acoustic pressures, boundary-layer tripping effects on radiated noise, and wavelet filtering
- Developed the spectral tool for acoustic analysis: cross-spectrum method
- Reduced up to 5.5 dBA in sound pressure levels through flow misalignment, and 2.0 dBA through trailing-edge morphing while improving aerodynamic performance for the morphed airfoil

Visiting Researcher at Stanford University   Jul 2022 – Aug 2022
The eighteenth biennial Summer Program of the Center for Turbulence Research (CTR)   *Stanford, USA*

- Worked on the topic titled, "Airfoil trailing-edge noise source identification using large-eddy simulation and wavelet transform." (Hosts: Prof. Sanjiva. K. Lele and Dr. Davy Brouzet)
- Conducted collaborated works with program participants specialized in turbulence and relevant multi-physics involving wavelet-denoising method and pressure decomposition, and published the research report

Engineer at Agency for Defense Development—South Korean government agency   May 2018 – Sep 2020
Aircraft Aerodynamics Branch   *Daejeon, South Korea*

- Designed control vanes used for thrust vectoring and rolling and yawing maneuvering control through computational fluid dynamics (Star-CCM+) and wind tunnel testing (KR Patent 10-2022-0013554)
- Designed deswirl stator to attenuate swirling flows induced by a ducted-fan blade
- Performed stability & control (S&C) and 6-DOF aerodynamic analysis of a vertical take-off landing (VTOL) aircraft and fan-blade system during level flight conditions through computational fluid dynamics and wind tunnel testing (collaborated with DLR-NWB)
- Conducted numerical simulations of VTOL configurations in transitional flight conditions to find aerodynamic similarities between forward flight speed and a blade pitch angle of ducted fan

Master Student at KAIST   Mar 2016 – Feb 2018
Computational Aerodynamics and Design Optimization Laboratory   *Daejeon, South Korea*

- Computed detached eddy simulation of fighter jet (KF-21) and delta wing with vertical tail configuration to analyze buffet characteristics and calculated buffet loads at high angles of attack, funded by Korea Aerospace Industry Ltd. (KAI)
- Performed code implementation of a hybrid RANS/LES approach (delayed detached eddy simulation) in an unstructured mesh-based FVM in-house code and cavity flow analysis to resolve eddy viscosity contents for a backward-facing step configuration

Teaching Experience

Teaching Assistant at University of California, Davis   Sep 2021 – June 2024
Davis, USA

- Financially supported with Teaching Assistant (TA) activity in classes of Thermodynamics (2021 Fall), Aircraft Propulsion (2022/2023/2024 Winter), Rocket Propulsion (2023 Fall), Thermo and Fluids (2022/2024 Spring), and Applied Aerodynamics (2022 Fall)
- Led the TA discussion session to teach supplemental materials in the classes of Thermodynamics (2021 Fall) and Aircraft Propulsion (2022/2023/2024 Winter)
- Held the TA office hours to help students understand the class materials and solve the practice problems, developed the rubric, and graded the quizzes and exams

Professional Service

- Journal reviewer of Journal of Fluid Mechanics (JFM) Rapids, 2025
- Paper reviewer of AIAA Aviation Forum, Las Vegas, NV, July 21-25, 2025
- Paper reviewer of 30th AIAA/CEAS Aeroacoustics Conference, Rome, ITLY, June 4-7, 2024
- Paper reviewer of AIAA Aviation Forum, Las Vegas, NV, July 29 - Aug 2, 2024
- Paper reviewer of AIAA Aviation Forum, San Diego, CA, June 12-16, 2023

Software and Analysis Techniques

Programming Languages	:	Python (Daily for research), Matlab (Daily for research), C++ (Source code modification), Fortran (Source code modification), and MPI libraries (Proficient)
CAD Software	:	CATIA (5 years) and OpenVSP for geometry parametrization (1.5 years)
Flow Solver	:	OpenFOAM (5 years), DAFoam&SU2 (1.5 years), Star-CCM+ (2.5 years), Fortran-based home-grown FVM flow solver (2 years), and CAMRAD-II (2 years)
Visualization	:	Tecplot, Paraview, and FieldView, all of which are coupled with macro scripts to extract images of unsteady flow motions every time step
Acoustic Code	:	PSU-WOPWOP (FW-H), Amiet's theory, and Brooks, Pope, and Marcolini (BPM) model
Optimization	:	Computational System Design Language (CSDL), modopt, Mphys/OpenMDAO, MACH-Aero Framework (pyGeo and IDWarp), and Meshing (Gmsh, Pointwise, and pyHyp)
Data Analysis	:	Signal processing—wavelet transform and wavenumber-frequency spectrum. Data-driven modeling—spectral proper orthogonal decomposition (SPOD) and dynamic mode decomposition (DMD)

Awards and Honors

- Joseph L. Steger Fellowship — May 2024
- Stanford University Center for Turbulence Research Summer Program Fellowship — July 2022
- National Science and Engineering Graduate Scholarship of Korea — Mar 2016 – Feb 2018
- Best Paper Award, Korean Society for Computational Fluids Engineering — Nov 2017
- Chancellor's Scholarship for Academic Excellence (Three Years) — Aug 2013 – Dec 2015
- KSAS-KAI Undergraduate Scholarship — Aug 2015
- Best Competition Award (Work of Capstone Design) — Jul 2015
